

SEO Audit Report

<https://centurionawards.com/>

CATEGORY	SCORE
crawlability	30
on page	74
performance	96
schema	92
trust	100
social	100
mobile	100
ai search	80

Generated 9/20/2026, 8:22:44 PM · 14 pages · medium confidence

PSI: unavailable (rate-limited) · robots.txt: found · sitemap: found

Top priorities

Highest-leverage fixes first — ranked by severity, then least effort. Clear these before anything below.

- HIGH

Sitemap served with X-Robots-Tag: noindex · impact 4/5, effort 1/5
Remove noindex from the sitemap response before a Search Console upload. Google can fetch a noindexed sitemap, but every listed URL that also sends noindex will be discovered and then excluded. Flip the header on the sitemap and on the pages you want indexed in the same change.
- HIGH

Noindexed via X-Robots-Tag header · impact 4/5, effort 1/5
Remove the noindex directive from the HTTP response header if this page should appear in search results (check CDN/server config).
- HIGH

Page set to noindex · impact 4/5, effort 1/5
Remove noindex if this page should appear in search results.
- HIGH

AI crawlers blocked at the HTTP edge · impact 4/5, effort 2/5
robots.txt Allow is not access. An edge/WAF/bot-fight rule is refusing named AI crawlers. Lift those blocks before claiming AI visibility, and do not treat a robots Allow as proof a crawler can read the page.
- MEDIUM

Canonicalized to a different URL · impact 3/5, effort 1/5
This page tells search engines to index a different URL instead of itself. If that's not intentional, set the canonical to this page's own URL.
- MEDIUM

Images missing alt text · impact 2/5, effort 2/5
Add descriptive alt text for accessibility and image search.

Site health checks

One-shot infrastructure checks: host-variant redirects (http/https, www/non-www), 404 handling, TLS certificate, contact/trust pages, a sample of internal links, and the measurement stack.

CHECK	RESULT
http://centurionawards.com/	→ https://centurionawards.com (HTTP 200)
https://www.centurionawards.com/	→ https://centurionawards.com (HTTP 200)
http://www.centurionawards.com/	→ https://centurionawards.com (HTTP 200)
404 handling	correct (HTTP 404)
TLS certificate	valid · 53 days left · Google Trust Services
Contact & trust pages	tel:, mailto: · about ✓ privacy ✓ terms ✓
Internal links checked	30 sampled · 0 broken · 1 redirecting
Analytics	GA4 (gtag.js)
llms.txt	found
AI crawler access	HTTP blocked: GPTBot HTTP 403, ClaudeBot HTTP 403, CCBot HTTP 403, Bytespider HTTP 403, Amazonbot HTTP 403; HTTP 200: PerplexityBot, OAI-SearchBot, Google-Extended. robots.txt Allow is not access.

Keyword focus

What the site actually emphasizes, ranked by **where** each term appears — not raw frequency. Placement is weighted Title ×5, H1 ×4, H2–H3 / meta ×3, URL / schema ×2, body ×1 (body capped so repetition can't outrank deliberate placement). The “Appears in” chips show which signals give each keyword its weight; blue chips (Title / H1 / headings) are the ones search engines and AI engines trust most.

KEYWORD	TYPE	APPEARS IN (SEO-WEIGHTED)	BODY USES	PROMINENCE
centurion	word	Title H1 H2-H3 Meta URL Schema Body	96	100
award	word	Title H1 H2-H3 Meta Schema Body	157	74
awards	word	Title H2-H3 Meta Schema Body	85	72
business	word	Title H1 H2-H3 Meta URL Schema Body	230	71
best	word	Title H1 H2-H3 Meta Schema Body	69	57
centurion awards	phrase	Title Meta Schema Body	55	57
winner	word	Title H1 H2-H3 Meta Schema Body	84	51
flagstaff	word	Title H1 H2-H3 Meta URL Schema Body	53	48
published	word	H2-H3 Meta Schema Body	82	46

KEYWORD	TYPE	APPEARS IN (SEO-WEIGHTED)	BODY USES	PROMINENCE
verified	word	TitleH1H2-H3MetaURLSchemaBody	48	45
record	word	H2-H3MetaSchemaBody	86	42
criteria	word	H2-H3MetaSchemaBody	75	40

- Your standout keyword “centurion” is well-aligned — it appears in the title, H1, and body, which is exactly what you want for your primary term.
- Themes present in your content but absent from any title or H1: “published”, “record”, “criteria”. Work the most relevant of these into headings to rank for them.
- Strongest multi-word phrases (usually higher-intent, easier to rank than single words): “centurion awards”.

Social share preview

Cat = category · **I/E** = impact / effort, each 1–5 (high impact, low effort = do first). Category score = 100 minus severity deductions (CRITICAL –40, HIGH –20, MEDIUM –10, LOW –4), counting each distinct issue type once so the score doesn't swing with the number of pages crawled. Overall = weighted average across categories. The Performance category combines signals observed directly from the HTML & headers (compression, render-blocking scripts, page weight, DOM size, image dimensions, response time) with Google's real-user Core Web Vitals field data (CrUX, incl. INP at the 75th percentile) when PageSpeed is run. Site health checks (host-variant redirects, 404 handling, TLS certificate, trust pages, sampled internal links) feed the crawlability and trust scores. Aligned with 2026 priorities: content quality & E-E-A-T, crawlability, page experience, and visibility to AI answer engines. Generated by the seo-audit skill.
